- Class id : 63

### Objective

1. [To Create Login \(using OAuth client\) and Register Page \(using HTML 5 storage\)](#)
2. [To Create Home Page \(a Mashup web page using knowledge service\)](#)
3. [To Design About and Contact Page](#)
4. [Good User Interface](#)
5. [Do Quality Check](#)
6. [To Create GitHub Repository](#)
7. [Use ZenHub for issues and increments](#)
8. [Create Wiki page](#)
9. [design a class diagram](#)

### Design and Screenshots/Code Snapshots

#### 1. Login and Register Page

We have used OAuth 2.0 service from [Google](#) and [Facebook](#) to login into home page.

## Login Page

### Login

Username

Password

☒ Remember me

Login

Register

or login with

## Using Google OAuth

```
$scope.googleLogin = function () {  
  var params = {  
    'clientid': YOUR-API-KEY,  
    'cookiepolicy': 'single_host_origin',  
    'callback': function (result) {  
      if (result['status']['signed_in']) {  
        // location.href = "home_page.html";  
        var request = gapi.client.plus.people.get(  
          {  
            'userId': 'me'  
          }  
        );  
        request.execute(function (resp) {  
          $scope.$apply(function () {  
            $scope.gmail.username = resp.displayName;  
            $scope.gmail.email = resp.emails[0].value;  
            $scope.g_image = resp.image.url;  
            localStorage.setItem("logged_user", "{" +  
              "\"name\": \"" + resp.displayName +
```

```

        "\", \"email\": \"" + resp.emails[0].value +
        "\", \"image\": \"" + resp.image.url +
        "\"}");
    })
  })
}
},
'approvalprompt': 'force',
'scope': 'https://www.googleapis.com/auth/plus.login
https://www.googleapis.com/auth/plus.profile.emails.read'
};
gapi.auth.signIn(params);
};

```

### Using Facebook OAuth

```

$scope.facebookLogin = function () {
  FB.login(function (response) {
    if (response.authResponse) {
      FB.api('/me', 'GET', {fields: 'email, first_name, name, id, picture'}, function
(response) {
        $scope.$apply(function () {
          $scope.facebook.username = response.name;
          $scope.facebook.email = response.email;
          $scope.fb_image = response.picture.data.url;
          localStorage.setItem("logged_user", "{" +
            "\"name\": \"" + response.name +
            "\", \"email\": \"" + response.email +
            "\", \"image\": \"" + response.picture.data.url +
            "\"}");
        });
      })
    }
  }, {
    scope: 'email, user_likes',
    return_scopes: true
  })
}

```

```
};
```

## using HTML 5 Localstorage

The screenshot shows the Chrome DevTools Application tab. The left sidebar lists storage areas: Application, Storage, and Cache. Under Storage, 'Local Storage' is expanded, showing a list of keys: kavin278, logged\_user, rahul, john, michael, and kevin. The 'rahul' key is selected. The main pane displays the value for 'rahul' as a JSON object: {first\_name: "Rahul Reddy", last\_name: "Yerva", email: "rahul28@gmail.com", username: "rahul"}. The 'email' field is highlighted in red in the original image.

Key	Value
kavin278	{first_name: "kavin kumar", last_name: "arumugam", ...}
logged_user	{first_name: "kavin kumar", last_name: "arumugam", ...}
rahul	{first_name: "Rahul Reddy", last_name: "Yerva", email: "rahul28@gmail.com", username: "rahul"}
john	{first_name: "john", last_name: "", email: "john", use...
michael	{first_name: "micheal", last_name: "", email: "michae...
kevin	{first_name: "kevin", last_name: "kevin", email: "kevi...

```
{first_name: "Rahul Reddy", last_name: "Yerva", email: "rahul28@gmail.com", username: "rahul"}
```

## 2. To Create Home Page

We have created a Mashup page using [Google Knowledge Graphs](#)

### Google API code

```
$scope.getResult = function () {  
    let search_word = document.getElementById("search-word").value;  
    let url_part_1 = "https://kgsearch.googleapis.com/v1/entities:search?query=";  
    let url_part_2 = "&key=YOUR-API-KEY&limit=1&indent=True";  
    $http.get(url_part_1 + search_word + url_part_2).then(function (response) {  
    }  
}
```

### 3. To Design About and Contact Page

#### Contact Page

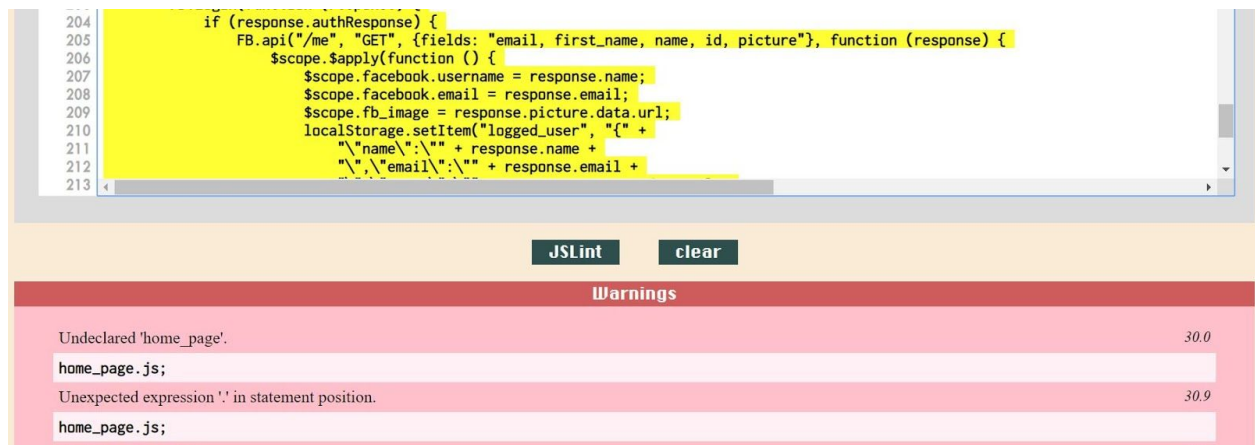

#### 4. User Interface

We have made a good design of the HTML pages using CSS3.

#### 5. Quality Check

We did quality check on JavaScript codes using [JSLint tool](#).

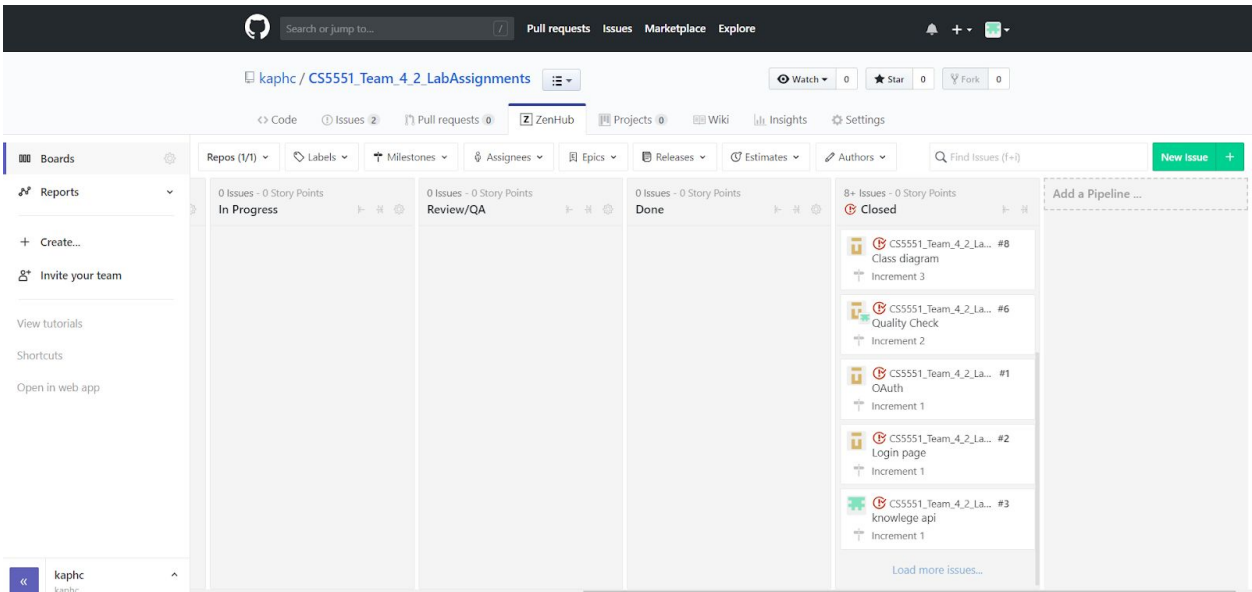

#### 6. To Create GitHub Repository

- Created a repository as ["CS5551\\_Team\\_4\\_2\\_LabAssignments"](#).
- Created two directories in github as [Source](#) and [Documentation](#).

# 7. ZenHub Tool

Contributions to master, excluding merge commits

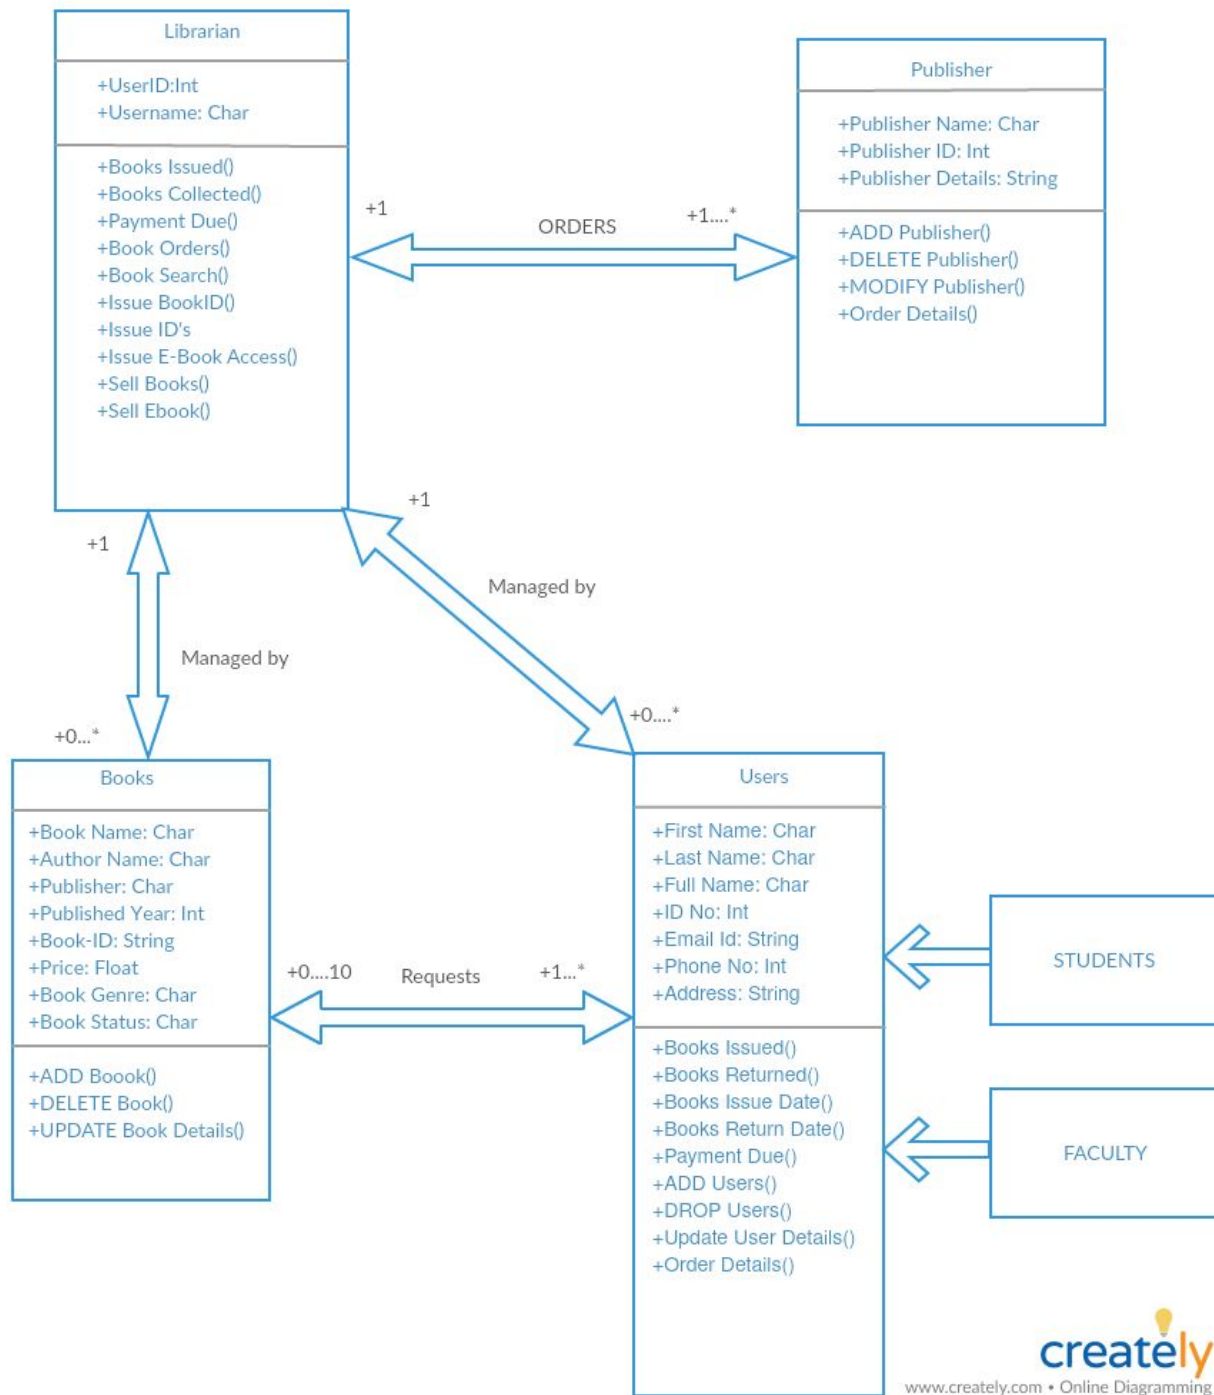

## 8. Create Wiki page

Create wiki page in our repository.

## 9. Creatly Tool

Created a class diagram for school library system using Creatly tool.

**Video**

Link to code execution - [here](#)

## Contribution By

### **Rahul Reddy Yerva**

- Created Login page (using OAuth client) and Register Page (using HTML 5 storage)
- JavaScript Quality Check
- Class diagram for school management system

### **Kavin Kumar Arumugam**

- Created Home Page (a Mashup web page using knowledge service)
- Designed About and Contact Page
- Wiki page creation and documentation
- Integration of over all application
